SKILLS

Vulnerability Management: Nessus · Tenable · CVSS · EPSS · CISA KEV · enterprise vulnerability prioritization workflows **Compliance & Frameworks:** NIST 800-53 · NIST RMF · FedRAMP · MITRE ATT&CK · CIS Controls · OWASP Top 10 **SIEM & Detection:** Splunk SPL · Microsoft Sentinel KQL fundamentals · Sigma rule familiarity · regex-based IOC extraction **Cloud Security:** AWS (IAM, EC2, S3, VPC, CloudTrail) — Cloud Practitioner certified **Networking & Packet Analysis:** TCP/IP · OSI · subnetting · routing/switching · Wireshark · DNS · TLS/SNI · ARP · packet capture analysis **Programming & Scripting:** Python (re, email, argparse, pytest) · Bash · PowerShell · regex · JSON **Operating Systems & Tools:** Linux (Ubuntu, Kali) · Windows + Active Directory fundamentals · Git/GitHub · VS Code · VirtualBox · pytest

CERTIFICATIONS & CLEARANCES

Certifications: CompTIA Security+ (DoD 8570) · AWS Certified Cloud Practitioner · CompTIA Network+ (*in progress*) · CompTIA CySA+ (*in progress*) **Clearance:** CBP Full Background Investigation (BI) — Active · U.S. Citizen

EXPERIENCE

Cybersecurity Intern — DHS HS-POWER Program

U.S. Customs and Border Protection · Vulnerability Assessment Team (VAT) · Ashburn, VA May 26, 2026 – August 3, 2026

- Supporting CBP Vulnerability Assessment Team on federal-scale vulnerability management operations across the CBP enterprise, aligned with NIST 800-53 and FedRAMP control requirements.
- Applying CVSS scoring and EPSS-informed prioritization to triage and contextualize scanner findings, incorporating CISA KEV awareness into remediation discussions.
- Gaining hands-on exposure to enterprise vulnerability scanning workflows, asset inventory processes, and remediation tracking within federal cybersecurity policy.

- Contributing to an independent research project on a current cybersecurity topic relevant to federal enterprise defense.
-

PROJECTS

Phishing IOC Extractor — Python CLI

github.com/samiali38183/cybersecurity-vault · Python · stdlib-only · pytest · MIT licensed

- Designed and built a Python command-line tool that parses raw RFC 822 (.eml) phishing samples and extracts five categories of indicators of compromise — IPv4 addresses, domains, URLs, email addresses, and MD5/SHA-1/SHA-256 hashes — using tuned regex patterns; outputs deduplicated, sorted JSON for downstream threat-intel enrichment.
- Implemented argparse CLI with pretty-print and file-output flags, robust error handling, type hints, and docstrings throughout. Authored a 10-test pytest suite covering each extractor function and edge cases (empty input, deduplication, case normalization) — all tests passing.

Network Traffic Analysis Lab — Wireshark

github.com/samiali38183/cybersecurity-vault · packet capture · MITRE ATT&CK mapped

- Captured and analyzed live network traffic across five protocol scenarios — TCP three-way handshake, DNS query/response, HTTP request, TLS Client Hello (SNI), and ARP request/reply — demonstrating cross-layer protocol literacy from L2 through L7.
 - Documented analyst-relevant indicators including SNI visibility for SOC monitoring of encrypted HTTPS traffic and ARP-cache poisoning signatures (MITRE ATT&CK T1557.002), with full README explaining each capture and its defender relevance.
-

EDUCATION

Northern Virginia Community College — Annandale, VA

Associate of Applied Science, Information Technology · Cybersecurity Minor · Expected May 2026 **GPA: 3.65** · Dean's List × 4 · Mason Advance Program (guaranteed transfer to George Mason University)

Relevant coursework: Linux System Administration · Network Security Basics · PC Hardware & OS Architecture · Microcomputer Operating Systems · Java Programming I
